ADA2AI

Dashboard & Capability Competitive Benchmark

Executive Product & Technology Assessment

How Ada2AI's dashboards and capabilities compare with five market benchmarks

Executive decision document — not marketing material

2 NOVEMBER 2026

Usable foundation — automated Football Intelligence not yet established

EXISTS IN CODE

What exists

- Role-based dashboards: player, coach, scout, organizations
- Player profile and coach evaluation form
- Video upload and Coach Workspace
- Scout search and position filters
- Arabic RTL interface

OPERATIONALLY PROVEN

Operationally proven

- 5 profiles, 5 players and 1 coach in the live database
- 31 rows in sport_identities
- 2 rows in football_coach_players
- No matches, reports or video analyses recorded (0)

NOT VERIFIED

Not verified

- YOLO / FastAPI pipeline in production
- Working evaluation history on the live database
- Player development over time
- Academy data isolation (tenant isolation)
- Accuracy of any AI output against ground truth

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Supabase snapshot, 2 Nov 2026 · Ada2AI GitHub main @31a060b

Executive summary — answers to the six questions

01	**How do we compare?**	Benchmarks cover different categories; Ada2AI sits closest to academy operations but has not reached any of them in maturity.
02	**How mature are the dashboards?**	A role-based structure exists in code; actual usage in the live database is very limited.
03	**What do we genuinely have today?**	Player profiles, human evaluation form, scout search, Coach Workspace, Arabic interface.
04	**What are the critical gaps?**	Data exposure via public policies, upload identity mismatch, missing evaluations table.
05	**Where can we win?**	Arabic-first academy player development: evaluation + video evidence + development history.
06	**What should we decide?**	Security first, fix identity and evaluation contracts, CV experimental, one-academy pilot, one deployment path.

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

Five critical discoveries

1	**The evaluations table does not exist in the live database** The code retrieves evaluations, but the table is missing in Supabase — no real evaluation history.	CRITICAL
2	**Player / Profile / Auth identity mismatch in video upload** A file can upload while the analysis is never registered — a silent failure.	CRITICAL
3	**Public player-media bucket and overly broad access policies** Potential exposure from configuration — not a confirmed breach.	CRITICAL
4	**No independently verified YOLO / FastAPI production pipeline** CV capabilities must not be marketed as operational.	HIGH
5	**Player comparison workflow and PDF export incomplete** /compare route is not registered; PDF button shows "coming soon".	MEDIUM

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Ada2AI GitHub main @31a060b (src/App.tsx · src/hooks/useMediaUpload.ts · src/pages/ScoutDashboard.tsx) · Severity: this deck's assessment

Five benchmarks — five different product categories

01

Hudl Wyscout

Professional scouting & recruitment

02

DataMB

Statistical football intelligence

03

Grintafy

Talent discovery & participation

04

Grinta Rush

Field-based assessment

05

Veo

Video-first academy analytics

We do not rank these products on one scale — each is measured within its own category

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Competitors' official public material as listed in the report's source register

Hudl Wyscout — Professional Scouting & Recruitment

- Global video library
- Player and team search
- Event-tagged video
- Shortlists
- Scouting reports
- Recruitment workflow
- API and integrations

KEY LESSON

The value is not any single feature but the connected workflow: player search → video evidence → recruitment decision.

For Ada2AI: don't compete in global pro scouting — learn to connect evidence to decision

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Hudl Wyscout official material (hudl.com) — per the report's source register

DataMB — Statistical Football Intelligence

- Radar
- Rank
- Plot
- Index
- Scout tools
- DataMB Chat

KEY LESSON

A metric is useful only when its definition, context, sample and comparison group are clear.

55	120+	5M+
leagues	metrics	data points

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Figures as reported in DataMB's official guide — not independently verified

Grintafy — Talent Discovery & Participation

- Player profiles
- Skills videos
- Tryouts
- Football CV
- Challenges
- Player participation
- Scout discovery

KEY LESSON

Access to players and recurring participation create value beyond analytics.

For Ada2AI: the academy is the access channel — repeat use before a global database

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Grintafy official material — per the report's source register

Grinta Rush — Field-Based Assessment Experience

- Competitive environment
- Changing match situations
- Adaptability
- Decision-making
- Academy participation

KEY LESSON

Assessment in a real competitive context reveals what statistics alone cannot.

An assessment / event format — not a verified standalone SaaS analytics platform

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Grinta Rush public event material — per the report's source register

Veo — Video-First Academy Analytics

- Video-first workspace
- Match recording
- Video clips
- Events feed
- Team and player analytics
- AI tracking
- Physical performance metrics
- Heatmaps and shot maps
- Analytics Studio
- Multi-match trends

KEY LESSON

Video analytics and AI tracking are already established capabilities in academy software.

For Ada2AI: no differentiation through video upload, heatmaps or AI terminology alone

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Veo official material (veo.co) — per the report's source register

Positioning map — six separate dimensions, no overall ranking

	Professional Scouting	Statistical Intelligence	Talent Discovery	Field Assessment	Academy Operations	Video Intelligence
Hudl Wyscout	●	—	—	—	—	◐
DataMB	◐	●	—	—	—	—
Grintafy	◐	—	●	—	—	◐
Grinta Rush	—	—	◐	●	◐	—
Veo	—	—	—	—	◐	●
Ada2AI (target)	—	—	—	—	◎	◌

● Core category ◐ Adjacent capability in public material — Not a product focus ◎ / ◌ Ada2AI target position (proposed)

Qualitative mapping derived from the category descriptions in the report — not a score · Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

Dashboard comparison — market reference vs. Ada2AI status

Dimension	Market reference	Ada2AI — available evidence	Status
Dashboard structure	Veo · Wyscout	Role-based dashboards: player, coach, scout, organizations	**Exists in code**
Information hierarchy	—	Needs restructuring (proposal on slide 14)	**Partial**
Player profiles	Wyscout · Grintafy	/player/:id route and player profile	**Exists in code**
Statistics	DataMB	Coach-entered metrics without source labels	**Partial**
Video workflow	Veo	Upload exists; identity mismatch; 0 analyses recorded	**Not proven**
Evaluation	—	Form exists; evaluations table missing in live DB	**Not proven**
Scouting	Wyscout	Search, position filters, pagination	**Exists in code**
Development history	Veo (multi-match trends)	Not proven on live data	**Not proven**
Reporting	Wyscout (scouting reports)	PDF shows "coming soon"; reports = 0	**Not proven**
Collaboration	Wyscout (shortlists)	Sharing from scout dashboard only	**Partial**
Administration	—	Organizations dashboard without membership or isolation	**Partial**
Mobile experience	—	Not assessed — no authenticated session	**Not assessed**

Evidence limitation: no authenticated Ada2AI session during the audit · Status from code (Ada2AI GitHub main @31a060b) and Supabase snapshot · Competitors from public material

Ada2AI product architecture — actual routes by role

PLAYER

Player

- **Player Dashboard** /player/dashboard
- **Player Profile** /player/:id
- **Video Upload** /player/upload
- **Video Analysis** /video-analysis

COACH

Coach

- **Coach Dashboard** /coach
- **Coach Workspace** /coach/workspace
- **Evaluation Form** /coach/evaluate/:playerId

SCOUT

Scout

- **Scout Dashboard** /scout
- **Player Search** /scout (search)
- **Comparison entry** /compare (not registered)

ADMIN

Administration

- **Organizations** /organizations
- **Rankings** /rankings
- **Club Dashboard** /club/rawdha

Data layer: Supabase (Auth · Postgres · Storage) — the only verified read/write backend

Ada2AI GitHub main @31a060b · src/App.tsx · Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

Player dashboard — what exists, and what is not proven

EXISTS

Exists in code

- Player information and profile experience
- Evaluation retrieval in code
- Navigation to video upload

NOT PROVEN

Not proven

- Working evaluation history on the live database
- Reliable longitudinal progress
- Verified automated insights

PROPOSED CONCEPT — NOT CURRENT PRODUCTION FUNCTIONALITY

Proposed information hierarchy

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Ada2AI GitHub main @31a060b (src/pages/player/Dashboard.tsx)

Coach dashboard & workspace — coach-entered is not AI

- Squad data
- Match statistics
- Pending analysis queue
- Interactive pitch
- Manual result entry
- Completed analysis history

Coach-entered ≠ AI-generated

A speed value typed in by a coach is not an AI-derived speed metric

Proposed source labels for every metric:

- Coach-entered
- AI-generated
- Imported
- Unverified

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Ada2AI GitHub main @31a060b (src/pages/coach/Workspace.tsx)

Scout dashboard — a solid base with two incomplete features

- Player search
- Position filters
- Pagination
- Player profile navigation
- Sharing
- Two-player comparison selection

INCOMPLETE

/compare route not registered in App.tsx

The compare button leads to a route that does not exist

INCOMPLETE

PDF download shows "coming soon"

Toast message: "PDF reports coming soon" (تقارير PDF قريباً)

KEEP

Search, filters, pagination, profile navigation

IMPROVE

Complete comparison and reporting — or hide them until they work

Ada2AI GitHub main @31a060b · src/App.tsx (no /compare route) · src/pages/ScoutDashboard.tsx ("coming soon" toast) · Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

An Organizations Dashboard is not a multi-tenant academy system

IMPLEMENTED

Implemented in the UI

- Organization listing
- Organization count
- Player count
- Verification status
- Average rating

≠

NOT ESTABLISHED

Not established

- Organization membership
- Tenant isolation
- Organization-level player ownership
- Academy-specific permissions

Organizations Dashboard ≠ Multi-Tenant Academy Management System · organizations table = 0 rows today

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Supabase snapshot, 2 Nov 2026

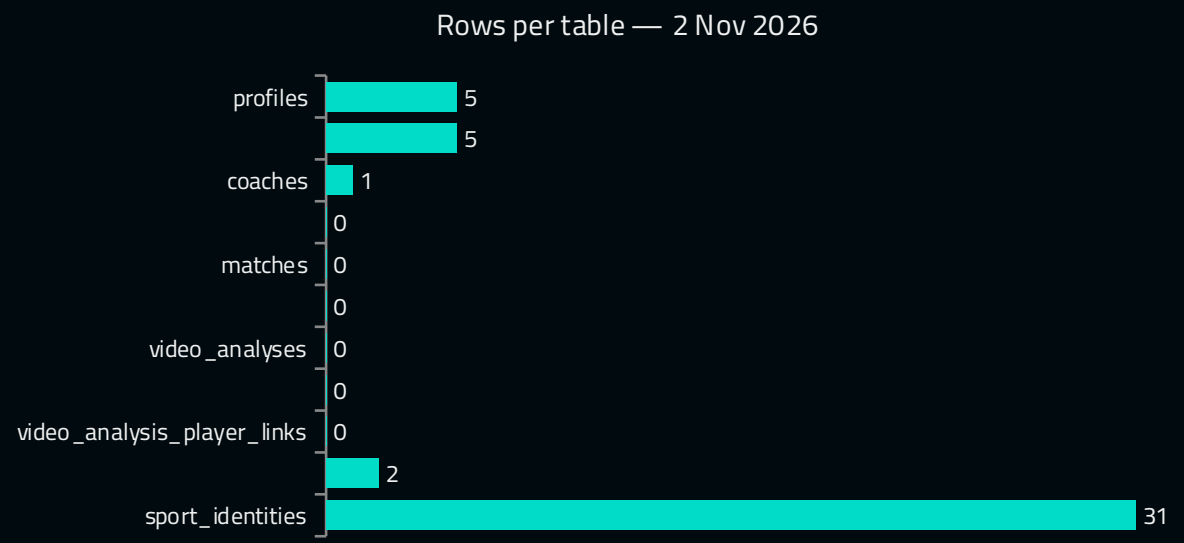

Live database reality — a table existing does not prove usage

Table	Rows
profiles	5
players	5
coaches	1
scouts	0
matches	0
organizations	0
video_analyses	0
reports	0
video_analysis_player_links	0
football_coach_players	2
sport_identities	31

6 / 11
tables with zero rows

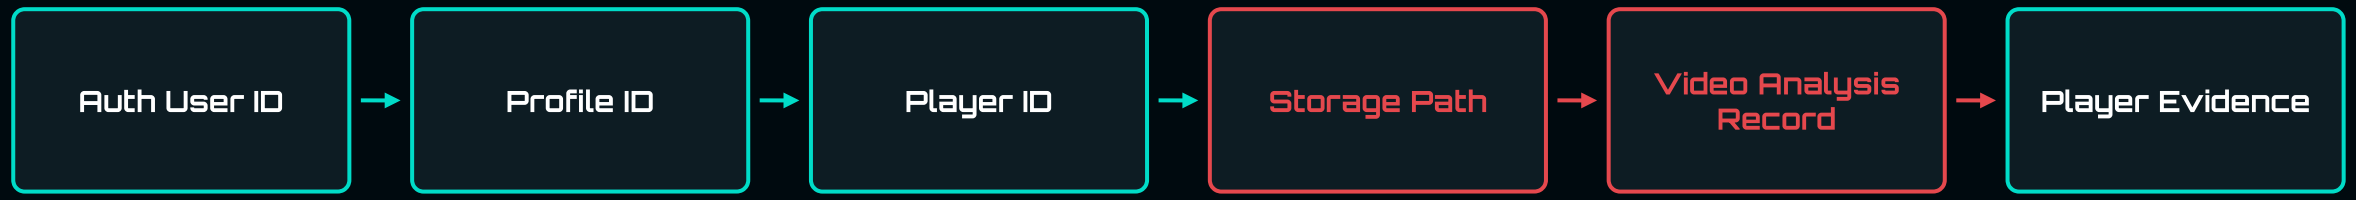

0
video analyses recorded

MISSING
evaluations table

Live Supabase snapshot, 2 Nov 2026 — Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

Data contract failure — upload success ≠ registered analysis

01

Upload path

Uses players.id in the storage path

`${playerId}/<timestamp>_<file>`

02

Storage policy

Expects auth.uid() as the first folder

`players.id ≠ auth.uid()`

03

uploaded_by

References profiles.id

`profiles.id ≠ players.id`

04

Analysis record

Creation failure handled as non-fatal

`console.warn(… non-fatal)`

Result: "upload successful" can appear while no analysis is registered — consistent with video_analyses = 0

Ada2AI GitHub main @31a060b · src/hooks/useMediaUpload.ts · storage policy and uploaded_by per Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

AI reality check — three levels, none verified in production

1 Computer Vision Detection
Detect players and ball in the frame
Not verified in prod

2 Tracking & Measurement
Track over time; distance & speed
Not verified in prod

3 Tactical Interpretation
Situations, decisions, patterns
Not verified in prod

Ground Truth: NONE

No independent execution evidence for YOLO / FastAPI in production, and no accuracy claim without reference data

Distinctions that must not be blurred

Bounding boxes	≠	Player performance
Track IDs	≠	Tactical intelligence
Heatmap	≠	Validated positioning
Manual speed	≠	AI-derived speed

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · No independent CV pipeline execution evidence as of the assessment date

Security & privacy: top priority (P0)

Finding (configuration)	Layer	Severity	Priority
player-media bucket is Public	Storage	CRITICAL	P0
Public SELECT policy on player-media	Storage Policy	CRITICAL	P0
Public read policy on video_analyses	RLS	CRITICAL	P0
Broad authenticated write policies on football tables	RLS	HIGH	P0
Broad authenticated read access to reports	RLS	HIGH	P0
API views require closer security validation	API Views	HIGH	P1
Organization-level isolation not established	Tenancy	HIGH	P0

Player videos, scouting reports, and youth athlete data must not be treated as public information by default.

CONFIGURATION FINDINGS

Potential exposure from configuration — not an independently confirmed breach

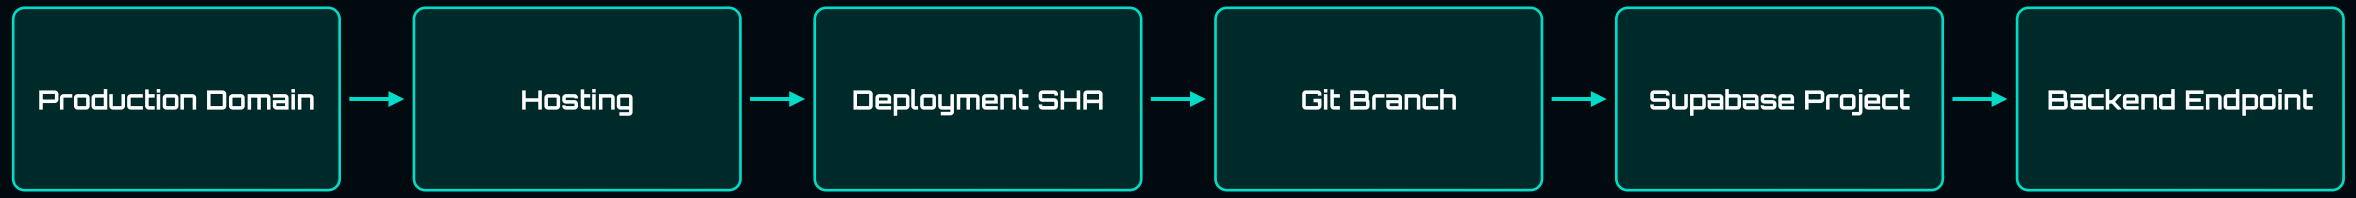

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Live Supabase policies (Storage / RLS) · Severity and priority: this deck's assessment

Authentication & deployment drift — we need one source of truth

Today: multiple elements, not linked

GitHub main	fix/auth-profile-late-response	EC2 / Nginx	Vercel ×N	Supabase project ref	FastAPI endpoint
Default branch	Auth fix · PR #2	Deployment claims — unresolved	Multiple projects	Project reference	Unverified in production

Required: one documented source-of-truth chain

We do not claim the production site is down — the issue is uncertainty about which version is actually running

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · GitHub fahdoshstore-droid/Ada2AI (main, fix/auth-profile-late-response, PR #2)

SCORES PENDING

Scores await the source report file

The file was not available when this version was prepared. No score has been estimated. Scores are to be copied exactly as in the report, including N/A and U.

Scale: 0 (absent) → 5 (advanced)

0 1 2 3 4 5

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md — 0–5 scale · N/A = not applicable · U = unknown / unverified

Competitive gap analysis — from gap to action

Gap	Customer impact	Business risk	Recommended action
1. Privacy & tenant isolation	Youth player data may be exposed	Loss of trust; academies decline	**Private bucket, tightened RLS, organization membership**
2. Evaluation persistence	No real evaluation history is saved	The core value does not work	**Create evaluations table; test save and retrieval**
3. Video upload identity contract	Uploaded video with no registered analysis	Silent failure; lost evidence	**Unify identifiers; make record failure visible**
4. Automated video pipeline verification	No evidence CV works in production	Claims may be seen as misleading	**Independent test and ground truth before any claim**
5. Comparison & reporting workflow	Buttons that do not work	Incomplete experience in front of customers	**Register /compare and build PDF — or hide both**

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

Keep · Improve · Build · Defer

KEEP

- Role-based dashboards
- Player profiles
- Scout filtering
- Coach Workspace
- Human evaluation
- Arabic RTL

IMPROVE

- Security
- Identity consistency
- Evaluation persistence
- Video upload workflow
- Comparison route
- Metric provenance
- Information hierarchy

BUILD — after validation

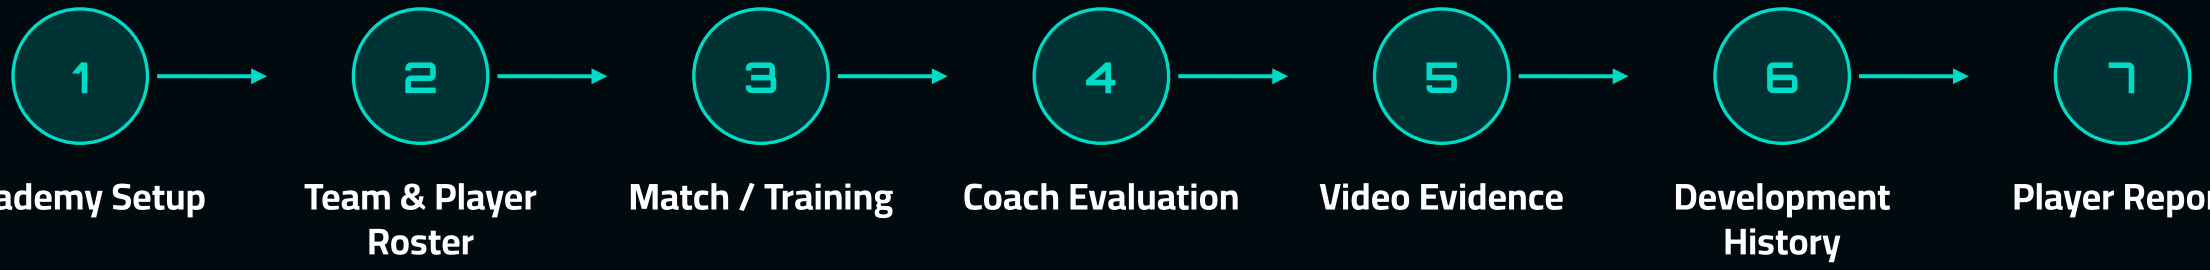

- Evidence-backed evaluation
- Longitudinal player development
- Academy reports
- Organization membership

DEFER

- Player DNA AI
- Similarity Engine
- Autonomous Scouting Copilot
- Global Player Database
- Full Tactical AI
- Social Network
- Marketplace
- Unvalidated physical metrics

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

Minimum viable product for the first paying academy

Mandatory foundation: secure organization permissions and per-academy data isolation

Not in the MVP

Automated CV analysis, tactical AI, global player database, marketplace

Success metric

One academy using the full workflow repeatedly

Proposed Concept — Not Current Production Functionality · Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

90-day roadmap — four phases, four gates

DAYS 1–15
Trust & Production Truth

DAYS 16–35
Academy MVP Consolidation

DAYS 36–65
One-Academy Pilot

DAYS 66–90
Paid Conversion & Intelligence Validation

GATE 1
Security, identity and upload tests pass

GATE 2
Coach can manage, evaluate and retrieve history

GATE 3
An academy uses the workflow repeatedly

GATE 4
Commercial demand and willingness to pay evidenced

Gate rule: no move to the next phase without documented evidence that the gate has been passed

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

Five decisions required today

1	**Fix security before growth**	No demos or pilots until P0 items are closed
2	**Fix identity and evaluation contracts**	One consistent ID from Auth to evidence; a real evaluations table
3	**Treat CV as experimental until validated**	No CV claims without independent verification and ground truth
4	**Pilot with one academy**	Depth of usage before number of customers
5	**Select one canonical production path**	Domain → Hosting → SHA → Branch → Supabase → Backend

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md

STRATEGIC NORTH STAR

Build a platform that proves how players improve, and helps coaches make better decisions.

Evidence Before Expansion · Product Trust Before AI Ambition · Customer Validation Before Scale

Assessment date: 2 November 2026

Evidence limitations and how to read this deck

No authenticated session

No logged-in Ada2AI dashboard session was available during the audit — no product screenshots in this deck.

Code ≠ execution

Code or a route existing does not prove the function works in production.

Schema ≠ behaviour

A table in the schema does not prove usage; we rely on actual row counts.

Configuration ≠ breach

Security findings are configuration-level potential exposure, with no evidence of unauthorised access.

No ground truth

No accuracy claim is made for any AI or CV output.

Competitors from public material

Competitor products were not tested from inside; figures are as published by the companies.

Source: ADA2AI_Dashboard_Capability_Benchmark_2026-11-02.md · Severity ratings in this deck are assessments
